Ax’l Jean A. Nacional

github.com/axlnacional · axljeanayalin@gmail.com · Philippines · +639166278431

Profile Summary

System Engineer with over 8 years of experience in designing, deploying, and supporting scalable infrastructure solutions across enterprise environments. Demonstrates deep expertise in Linux/Unix (RedHat, CentOS/Rocky, Kali, SLES, Ubuntu) and Windows Server (2009–2025), with a strong emphasis on cloud platforms including AWS, Google Cloud Platform (GCP), and Microsoft Azure. Skilled in automating cloud operations using Shell, Batch, and PowerShell scripting to enhance system reliability and reduce manual overhead. Adept at troubleshooting complex issues, optimizing cloud resources, and implementing best practices for security and performance. Highly adaptable, proactive, and collaborative—committed to continuous learning and delivering cloud-native solutions that drive business value.

Skills

Technology `MS Windows Server` `Linux` `Unix` `Ubuntu` `RHEL` `CentOS` `Kali` `SLES` `AWS` `GCP` `Azure` `Cloud` `Tomcat` `Nginx` `IIS` `Icinga` `DataDog` `Alertra` `PRTG` `Grafana` `Bitbucket` `GitHub` `SVN` `Jira` `ServiceDesk` `SalesForce` `Splunk` `ServiceNow` `MySQL` `Java` `HTML` `Python` `Bash` `PowerShell` `OS Hardening/SRA` `LAMP servers` `DHCP` `DNS` `FTP` `NTP` `SMTP` `SFTP` `Samba` `NFS` `Pentaho/ETL` `SAP BO` `Ansible Tower` `Terraform` `Cygwin` `MSSQL` `Oracle`

Experience

PUMA Sports Philippines Inc., Philippines

Cloud Engineer — *July 2025 – Present*

- Provide L2/L3 support for Azure and Google Cloud Platform infrastructure, ensuring high availability and timely resolution of cloud-related incidents and service requests.
- Deploy, manage, and optimize cloud resources in Azure and GCP to support secure, scalable, and business-aligned solutions.
- Develop and maintain Infrastructure as Code (IaC) using Terraform to standardize cloud deployments and improve operational efficiency.
- Monitor cloud system performance, identify anomalies, and implement proactive improvements for performance, cost optimization, and scalability.
- Collaborate with cross-functional teams to enforce security policies, compliance requirements, and adapt global standards across cloud environments.
- Provide technical expertise for cloud initiatives and projects, continuously evaluating emerging technologies to drive platform improvements.

Projects - **AVD Migration Win10 to Win11 (Azure)** — Executed the migration of Azure Virtual Desktop session hosts from Windows 10 to Windows 11 ahead of Win10 End of Life, ensuring application compatibility, security compliance, and minimal user disruption. - **RoomWizard Migration to New Azure Subscription** — Redesigned and migrated the RoomWizard solution to a new Azure subscription, delivering a more efficient architecture to centrally manage and support all PUMA meeting rooms. - **Cost Optimization via Automation and Runbooks** — Implemented automated runbooks to optimize cloud resource usage, reduce operational costs, and enforce efficient resource management across environments. - **Jinja-Based One-Shot Deployment Templates** — Developed Jinja-templated Infrastructure as Code to enable single-command provisioning of standardized Azure resources including Windows VMs, Linux VMs, Windows SQL Server VMs, and Windows VMs with availability options — reducing deployment time and ensuring consistency across environments. - **One-Shot Subscription Deployment** — Engineered a fully automated end-to-end subscription deployment pipeline, enabling rapid, repeatable provisioning of complete Azure subscription environments with all required configurations and baseline resources. - **GitHub Actions CI/CD for Ticketing Tool** — Successfully implemented and deployed a

GitHub Actions pipeline to automate the build and local execution of an internal ticketing tool, enabling consistent and reliable delivery directly on local PCs without manual intervention.

Infrastructure Specialist – System and Network — *November 2024 – July 2025*

- Delivered 24/7 global L2/L3 support for cloud and on-prem systems, ensuring high availability and rapid resolution of incidents and service requests.
- Performed Azure administration tasks including resource provisioning, identity and access management, and monitoring to support scalable and secure cloud operations.
- Managed and maintained network infrastructure components such as firewalls, switches, SSL portals, and wireless access points, supporting secure connectivity.
- Administered and audited Active Directory (AD) security groups and objects to support identity governance across hybrid environments.
- Maintained and enhanced IT security systems including web filtering and endpoint protection to safeguard cloud and enterprise environments.

Cardinal Health International, Philippines

Cloud Engineer (Infrastructure) — *January 2024 – November 2024*

- Managed and supported hybrid cloud infrastructure across AWS, GCP, and on-prem environments, ensuring high availability and performance.
- Responded to and resolved internal client requests including break/fix issues and enhancement tasks while maintaining SLAs.
- Performed routine system maintenance, patching, and configuration changes to optimize infrastructure health and compliance.
- Developed and maintained automation scripts using PowerShell, Bash, and Python to streamline operational tasks and improve efficiency.
- Monitored infrastructure and application health using enterprise monitoring tools, proactively addressing potential issues.
- Collaborated with cross-functional teams to support IaC practices and CI/CD pipeline automation.
- Maintained and enhanced internal knowledge bases, contributing to documentation and process improvement initiatives.
- Participated in on-call rotation to provide 24/7 support coverage for critical systems and services.
- Ensured compliance with security standards and frameworks such as ITIL, PCI, ISO 27001, and SOX.
- Administered and troubleshot systems including Windows, Linux, Active Directory, DNS, and storage technologies.

Projects - **Gold Image (GCP)** — Maintained and standardized GCP Gold Images for Windows Server (2012, 2019, 2022) and Linux (CentOS 7, Rocky 8, RHEL 6–8, SLES 12.2–15), ensuring monthly security patches and compliance. Leveraged Terraform, Git, and Concourse CI for automated image build and deployment pipelines. - **Cross-Platform Auditing Script** — Developed a PowerShell and Bash auditing script to scan over 1,000 Windows and Linux servers for AD group compliance, integrated and executed via Tanium for automated, scalable enterprise-wide checks.

Deltek Systems Ltd., Philippines

Senior Cloud Engineer — *November 2021 – January 2024*

- Built and maintained SaaS environments including application setup, configuration, and customer provisioning for Deltek products.
- Performed server maintenance, security configurations, and managed vulnerability and audit compliance.
- Provided L3/L4 technical support, troubleshot complex issues, and led internal process improvements.
- Collaborated with global teams on application delivery and managed internal projects to completion.
- Created and maintained automation tools, technical documentation, and supported cloud release activities.

Projects - **UTM to Palo Alto Migration** — Led the seamless migration of enterprise UTM infrastructure to Palo Alto Networks, enhancing security and efficiency while ensuring uninterrupted business operations. - **NSAFT Setup for 1,000+ Servers** — Implemented and configured SAF-T (Standard Audit File for Tax) across 1,000+ servers, streamlining financial data reporting and compliance processes. - **SSL Certificate Renewal Automation via Ansible Tower** — Engineered a robust automation solution using Ansible Tower to streamline SSL certificate renewal, enhancing security, minimizing downtime, and improving management across diverse server environments. - **OS Upgrade: Windows 2012 to 2019 (1,000+ Servers)** — Spearheaded a large-scale OS upgrade initiative transitioning 1,000+ servers from Windows Server 2012 to 2019, ensuring enhanced performance while adhering to tight deadlines. - **Annual Disaster Region Simulation** — Organized and executed annual disaster region simulations facilitating

comprehensive preparedness, response testing, and effective crisis management. - **Project Incubator: AWS to GCP Migration** — Orchestrated the seamless migration of infrastructure from AWS to GCP, concurrently transitioning from Windows to Linux, resulting in enhanced scalability, cost optimization, and improved performance.

DTN Philippines Inc., Philippines

System Support Engineer — *October 2019 – November 2021*

- Responsible for incident, request, problem, and change request processes.
- Handled and monitored platforms including Icinga, PRTG, Alertra, Grafana, DataDog, VictorOps (Splunk), and Spacewalk.
- Analyzed and resolved incidents for quick outage recovery and provided root cause analysis.
- Configured user accounts and profiles on the network using Active Directory.
- Set up and monitored build, test, and deployments on GitHub/Bitbucket.
- Utilized Puppet to automate configuration, management, and maintenance of server infrastructure; developed custom modules and enforced desired state configurations for updates, patches, and deployments.
- Conducted OS updates and patching every 3 months across managed servers.
- Planned and implemented system automation for operational efficiency.
- Created documentation using Confluence/Wiki.

SMS Global Technologies Inc., Philippines

Associate System Engineer — *January 2018 – September 2019*

- Provided intensive support for project requirements and successfully deployed solutions into production environments.
- Developed shell scripts to execute processes automatically.
- Completed OS Hardening/SRA per client requirements.
- Performed SAT and UAT testing before deploying projects.
- Managed MOP validation prior to production implementation.
- Provided quality knowledge transfer to operations teams.
- Worked closely with clients to establish problem specifications and system requirements.
- Created a Kafka producer Java application aligned with client specifications.

Education

Technological University of the Philippines Visayas

Bachelor of Science in Electronics Engineering — *April 2017*

Certifications

Certification	Validity
AZ-305 – Azure Solutions Architect Expert	September 2026 – September 2028
AZ-400 – Azure DevOps Engineer Expert	June 2025 – June 2027
AZ-700 – Azure Network Engineer Associate	March 2025 – March 2027
AZ-104 – Azure Administrator Associate	December 2024 – December 2026

Training

Course	Provider	Year
CSSLP	SMSGT	2019
RHEL Training	Udemy	2020

Course	Provider	Year
AWS Practitioner	Udemy	2021
Python Training	Udemy	2022
Terraform Training	Deltek / HashiCorp	2023
AZ-104	Puma / Misnet	2024
AZ-700	Puma / Misnet	2025
AZ-400	Puma / Misnet	2025
